

ELEVATE YOUR BONDING EXPERIENCE

Discover the essence of superior bonding with TRECORA's innovative specialty synthetic wax for hot melt adhesive (HMA) formulations. We specialize in crafting the essential building blocks that empower adhesive manufacturers to create exceptional bonding solutions.

Our HMA innovations revolutionize the bonding process, offering unparalleled benefits:

- Volatile-Free
- Lightning-Fast Setting
- Low Substrate Penetration
- Water Insensitive

Imagine a bonding compound in its molten state, seamlessly creating bonds that defy expectations. From securing solar panels and appliances to ensuring durable bookbinding, TRECORA's advanced performance additives for HMA formulations excel across a spectrum of applications.

Whether it's delicate tasks requiring precision like hot glue guns or demanding industrial environments, our innovations deliver versatile and reliable performance.

THE DIFFERENCE

The key lies in the nature of our speciality polymers, ensuring robust and enduring bonds. Moreover, the precisely controlled melt properties facilitate accurate application, minimizing waste and maximizing production efficiency.

**PROVEN SMALLER
ENVIRONMENTAL
IMPACT
COMPARED
TO FT WAX***

*TRECORA wax generated a 75% lower carbon footprint measured by kgCO₂eq per kg of product produced, based on a study of cradle-to-gate environmental impact according to ISO 14067:2018. TRECORA's incorporation of waste waxes significantly reduces emissions. For methodology and details, see the Franklin Associates study, July 2010, Page 163/572 or AD-5.
